

# Essentials vs Accessories

Indoor comfort in your home is about more than just adjusting the temperature on the thermostat. Many homeowners overlook the need for necessary components and systems that can improve the indoor air you breathe. Indoor air quality products and systems are quite frequently treated as accessories. We define them as indoor air essentials.

## Whole-Home Evaporative Humidifiers

### Why buy an evaporative humidifier?

The HE18F Evaporative Humidifiers provide whole-home humidification and use the warm air from the furnace with fan assist to evaporate water that is trickled over an internal humidifier pad.

- Improves indoor comfort throughout the home, helps to reduce dry skin, scratchy throat or electrostatic shocks that may be caused by low humidity levels
- Increases the relative humidity in your home, allowing you to lower the setting on your thermostat and still have the same level of comfort
- Cost effective option to add humidity to your home's indoor air compared to steam humidification
- Whole-home humidification without the need for frequent water re-filling and pad cleaning, compared to portable humidifiers<sup>1</sup>

## Whole-Home Electode Steam Humidifiers

### Why buy an electrode steam humidifier?

Clean Comfort Steam Humidifiers automatically help to maintain comfortable humidity levels in homes when dry indoor air might cause problems. Proper humidification enhances indoor comfort and helps to lessen static electricity and other damaging effects of dry air.

#### Benefits include:

- Automatic whole-home indoor humidification without the need for frequent water re-filling and pad cleaning, compared to portable humidifiers
- Ideally suited for indoor heating and cooling systems that have lower air flows and air temperature in the ductwork that might reduce humidity delivery when using an evaporative whole home humidifier
- Proven electrode steam humidification performance from the manufacturer that invented the technology over 40 years ago

### Why is my portable humidifier not sufficient?

Stand-alone or portable humidifiers simply cannot support a home's total humidity requirements. They are only capable of providing humidity in the proximity of the room where they are located. Whole-home humidifiers provide humidity to all of the conditioned airflowing through the home and do not deposit dried mineral dust on the floor like portable humidifiers can. Whole-home humidifiers also do not require manual refilling or cleaning like portable units.

## Room/Portable vs Whole-Home
